

What are the options for RWH consultation?

Waterco offer a three stage consultation procedure for your RWH needs, including:

1. An initial **screening study** to determine your main requirements, allowing us to tailor the following stages to fit your needs.
2. A more detailed study, involving a site visit and production of an **assessment report**, evaluating all possible solutions and respective price ranges.
3. A bespoke quote for the **full work**, carrying the project right through to completion.

What information do you need from me?

All the information we require from you is obtained through stage 1 of our consultation. Simply fill out all available information in our standard questionnaire, available to download directly from our website.

The schedules below detail what is included at each step of the RWH consultation:

Stage 1 – SCREENING STUDY QUESTIONNAIRE

Purpose

This is to help us get an idea of what type of system you will require.

Price: FREE (download and return the questionnaire form available on our website)

Included Items

- | | |
|------------------------------------|--|
| ✓ Project Details | ✓ Building Requirements |
| ✓ Roof Details | ✓ Optional Extras |
| ✓ Intended use for Harvested Water | ✓ Qualification for Enhanced Capital Allowance |
| ✓ Site Restrictions | ✓ Other Requirements |

Stage 2 – ASSESSMENT STUDY

Purpose

Along with a scheduled site visit, in this stage we will explore the range of designs for your required RWH system and provide you with a choice of quotes and providers, assessing which is best for you.

Included Items

- Site visit
- Full assessment report detailing:
 - ✓ Site study local rainfall
 - ✓ System type
 - ✓ Required tank
 - ✓ Tank location
 - ✓ Required components
 - ✓ Estimated payback time
 - ✓ Supplier and installer recommendations
 - ✓ Full range of quotes

Stage 3 – PROJECT MANAGEMENT AND COMPLETION

Purpose

If you are happy with the results of Stage 2, we can then take on the project management role and see your chosen RWH solution through to completion.

What we do:

- Act as on site advisors, liaising with and coordinating all parties involved with the installation
- Use suitably qualified and experienced contractors
- Carry out or arrange commissioning of the system
- Offer advice on associated issues that will enhance the system and ensure regulation and standards compliance
- Ensure programme of work is to schedule and keep you informed of progress.
